New ST-1200-CH Prep Tool for LMR-1200[®] cables now available from Times Microwave Systems

We have just introduced the ST-1200-CH cable prep tool for LMR-1200. This tool is designed to simplify the termination process of our new two-piece LMR-1200 connectors. It can also be used with any of the older LMR-1200 connector designs that may still be in customer inventories. It has a special blade that creates a beveled cut on the outer polyethylene cable jacket.

The beveled jacket cut helps center the back end of the connector over the cable during the connector attachment process. It also helps in getting the weather tight O-ring in the back of the connector, up over the outside of the cable jacket.

The ST-1200-CH (3192-124) tool is currently available and Lists for \$165. It may be used with LMR-DB, FR, LW and LLPL versions of LMR-1200. This tool replaces the ST-1200C (3190-311).

LMR[®] cables are low loss, flexible, non-kinking RF transmission line cables that utilize easy-to-install connectors and are suitable for use as antenna feeders, system jumpers and interconnects.

About Times Microwave Systems

Times Microwave Systems has over 50 years experience in designing innovative, high-reliability, coaxial cables and assemblies for demanding interconnection problems. An engineering oriented organization, the company specializes in the design and manufacture of high performance flexible and semi-rigid coaxial cable, connectors, and cable assemblies for RF transmission from HF through microwave frequencies.
