Times Microwave Systems Advises on Forthcoming Price Increases

Due to continued dramatic increases in material costs for metals and petrochemicals used in the manufacturing of all coaxial cable products and in order to recoup these costs, it is anticipated that all cable prices will be increasing significantly in the near term.

In particular, during the past 12 months copper prices have increased 25%, silver prices have risen over 100% and prices for polymers have risen as much as 50%. Times Microwave Systems has worked aggressively to manage costs however with material costs largely outside of our control it will be necessary to increase cable prices over the coming months. We will work to minimize the impact of these increases however with skyrocketing material costs they are nonetheless expected to be significant.

Times Microwave Systems will continue to provide the best coaxial products in the industry and value engineered solutions to our customers.

About Times Microwave Systems

Times Microwave Systems has more than 60 years experience in designing innovative, high-reliability, coaxial cables and assemblies for demanding interconnection problems. Times specializes in the design and manufacture of high performance flexible and semi-rigid coaxial cable, connectors, and cable assemblies for RF transmission from HF through microwave frequencies as well as lightning and surge protection products.
