Connectors for Cables That Move

Twist and Rotate

High performance cables routed across opening doors and panels, folding structures on aircraft wingtips, helicopter tail booms, and ship radars require a specialty connector that can withstand constant motion. Our Rotating Coaxial Connector—a continuously rotating 360° connector capable of operating broadband from DC-18 GHz—is the right choice.

We designed our Rotating Coaxial Connectors with rugged materials using corrosion-resistant stainless steel, titanium, gold plated beryllium copper, and phosphor bronze. Built to withstand harsh environments, the connectors weigh only 150g, making them a light weight alternative over traditional rotating joints.

Flying on an aircraft near you and tested up to one million 360° rotation cycles, this connector is ready for the long haul or the carrier landing that a loose cable cannot survive.
