PhaseTrack®-092

Over 2,500 active satellites track through the skies—charged by the kilogram to launch, any added weight requires more fuel which increases cost. Engineers scrutinize every cable, bolt and connector to ensure each component is as light as possible.

A significant contributor to overall weight is the nearly 6,000 cables on board. Satellite designers turn to Times for the lightest cables and connectors. Our PhaseTrack®-092 lightens cabling weight up to 35%, greatly reducing launch price tags.

Lighter weight components cannot compromise overall performance. The difference in signal delivery is known as the “tracking window,” and PhaseTrack®-092 provides superior phase tracking. A preferred light weight cable for successful satellite missions.
