Times Microwave Systems Introduces Clarity™ 50 GHz Test Cables

Times Microwave System introduces its latest innovation: Clarity™ 50 GHz test cables. Designed to enable new technologies like 5G and cloud computing.

This new line of test cables boasts best-in-class RF stability with flexure. The crush and torque resistant steel armor provides uncompromising flexibility. Times' engineering team carefully studied how actual users handle test leads. The result is a double safeguard: an ergonomic strain relief (armored version) for trouble-free, long flex life and SureGrip™ coupling nut for comfort over numerous mating cycles.

To better serve customers, the Clarity™ 50 line has a stock to six-week lead time. “We are able to serve the growing market demand for higher frequency with innovative and durable products,” said **Bill Callahan**, GM of Times Microwave Systems.

Clarity™ 50 GHz cables are ideal for 5G network development, R&D labs, Bench Vector Network Analyzers, and RF modular testing.

Do you have a tough challenge?
Email techquestions@timesmicro.com for help.

About Times Microwave Systems

A pioneering brand in innovative RF and microwave interconnect assemblies, cables and connector designs, Times Microwave Systems is a division of Amphenol. The company has more than 70 years of experience in the industry and offers the most comprehensive suite of products in the market. TMS continues to rapidly expand its portfolio by addressing defense, medical, telecommunications, precision test, and space applications. With a staff of more than 100 engineers and a global manufacturing presence, TMS is uniquely qualified to produce the right solution for our customers' complex requirements.
